

**WHY WASN'T  
I TOLD?**

**[WWW.ABORTIONBREASTCANCER.CA](http://WWW.ABORTIONBREASTCANCER.CA)**

**FACT:** Pregnancy causes breast tissue to grow and mature into cancer-resistant, milk-producing cells. Abortion halts this process, and leaves women who choose abortion over childbirth with a greater number of cancer-vulnerable cells and a greater lifetime risk of breast cancer.

**FACT:** Since 1957, over 50 studies link abortion to an increased risk of breast cancer.

**FACT:** In the 1960s, before abortion was readily available, a Canadian woman's lifetime risk of breast cancer was 1 in 20. Now the National Cancer Institute of Canada says it's 1 in 9.

**ARE WOMEN BEING INFORMED?**
